Orientation Training on Fecal Sludge and Septage Management

A training designed to equip decision makers, practitioners and professionals to prepare and plan Fecal Sludge and Septage Management (FSSM) initiatives at town, state or national level.

More than 62 lakh toilets have been built in Urban India under Swachh Bharat Mission since 2014. While we have almost succeeded in providing access to toilets with more than 50% Indian households depending on on-site sanitation systems (OSS), the challenge we face today is to manage the waste collected in the OSS. FSSM is a quick and inexpensive solution that can drastically transform the sanitation situation in small towns and cities.

This training will help sanitation practitioners understand the basics of FSSM, subsequently plan and implement it.

Post the training, the participants will be able to:

- Understand the various aspects of FSSM
- Create a preliminary plan for implementing FSSM in their town/city
- Draft regulations for enabling FSSM in their city or town
- Compare and select business models for efficient FSSM specific to their city/town

BLENDED TRAINING

Online trainings as a precaution against risk from COVID—19
- Live sessions
- Self paced Learning on e-learning platform accessible on computer and mobile devices
- Trainings will be Certified

LANGUAGE

English

DURATION

- 10 Days
- 90 minutes per day

KEY COMPONENTS

- Introduction to FSSM
- Technology options across the sanitation value chain
- Operating models
- Planning and financing
- Regulations
- IEC and BCC
